JOSH BERNS

AI Applications · Product · Engineering

boshjerns@gmail.com • boshjerns.xyz • github.com/boshjerns

SUMMARY

I build applications that turn information into useful actions with AI. Typical systems combine retrieval-augmented generation, chat, scraping pipelines, and structured databases. I ship quickly, work closely with users, and have two apps live in the iOS App Store.

CORE SKILLS

- **Languages & Frameworks:** JavaScript, TypeScript, React, React Native, Electron, Node.js, Python.
- **Data:** PostgreSQL, Supabase, Neon, Firebase, pgvector, embeddings for text and images.
- **AI:** OpenAI models, RAG systems, Whisper.cpp, Llama.cpp, Databricks.
- **Automation:** Playwright, browser automation and scraping.
- **Other:** Payments (including web3), deployment and packaging, real-time user interfaces.

SELECTED PROJECTS

- **DoFDGPT:** Contract intelligence for government contractors — discovery to proposal on document-heavy solicitations. Continuous scraping of SAM.gov, embedded DB, and AI retrieval for fast review. https://dofdgpt.com
- **Mithril Whisper:** Privacy-first AI voice dictation that runs entirely on-device using Whisper.cpp. Global hotkey, heads-up overlay, and zero data transmission. Site: https://mithril.solutions
- **Mithril Local LLM Suite:** On-device LLM tools that run entirely on device. Voice dictation with a minimal heads-up display and hotkeys, built for privacy and low-latency daily use. **1,000+ downloads • Released September 2025**. Site: https://mithril.solutions • App Store: https://apps.apple.com/us/app/local-llm-mithril/id6751945393
- **BlogAura:** AI-assisted writing and publishing workflow. Collects research, organizes drafts, and helps create clean posts with low friction. https://blogaura.ai
- **Deploy Forward:** Parent company under which I conduct all development work and product releases. https://deployforward.com

OTHER WEB APPS

- https://anydocai.com — Converts any doc/image into clean HTML, Markdown, CSV.
- https://www.chatwithmydoc.live — Create secure links to chat with documents (PDFs, HTML, etc.).

- https://blogaura.ai — AI-assisted writing and publishing workflow.

IOS APPS

- **Mithril Local LLM Suite:** Runs entirely on device. **1,000+ downloads · Released September 2025**. App Store: https://apps.apple.com/us/app/local-llm-mithril/id6751945393
- **Infipedia:** A generative, “infinite Wikipedia” that runs 100% locally on your device. Endlessly click through topic links, styled like Wikipedia. App Store: https://apps.apple.com/us/app/infipedia/id6752109334

HIGHLIGHTS

- Two iOS apps published on the App Store.
- Comfortable with rapid prototyping and long focus sessions.
- Work directly with users to iterate.

More projects and code on GitHub at github.com/boshjerns.

WEB3 PROJECTS

- **Camera Person:** Led a Web3 dApp connecting 122 photographers across 39 countries (@camerapersonnft). Launched an NFT collection with equal, on-chain payouts to all artists; coordinated public sales and executed even revenue distribution globally. This project involved significant smart-contract development and was my introduction to software engineering.
- **Stealth Solana Project:** Recently ran a stealth Web3 initiative on the Solana network that raised hundreds of thousands of dollars.
